

EON SHARP CUT RESISTANT GLOVES WITH POLYURETHANE COATING –  
ECONOMICAL SOLUTION FOR PRECISE WORK WITH SHARP OBJECTS!

## SHARP 518

EN 388  
4542

## SHARP 388

EN 388  
4343

EON models Sharp 518 and Sharp 388 with polyurethane coating are designed for **precise work in dry conditions where there is a risk of cuts**. **Sharp 518** provides the highest degree of cut protection during such work operations because it **has the highest marking of 5** according to the EN 388 standard. For the model **Sharp 388** this marking is **3**.

Additional **extended TCD protection of the sensitive area between the thumb and the index finger** makes **EON Sharp 388** a truly revolutionary glove in the field of cut protection. If your main problem with cut protection gloves was tearing of the gloves in this spot while handling rough and sharp objects – **EON Sharp 388** is the solution.

**Seamlessly knit liner** of these gloves is made from quality **nylon**, which is considered as the most comfortable material for the manufacture of liners for dipped gloves. The level of flexibility and comfort for the user is further enhanced by the addition of **spandex** (EON Sharp 518) and **lycra** (EON Sharp 388) into the liner. The last element of the technically advanced construction of the liner for these models is **HPPE** (High Performance Polyethylene) which provides the before mentioned cut resistance without sacrificing flexibility. In addition to cut resistance, these two models also have the **highest level of abrasion and tearing resistance** – level 4 in accordance with EN 388 standard.

Unpleasant odor which occurs as a result of sweat in contact with synthetic materials is one of the main problems for all safety gloves users. EON gloves Sharp 518 and Sharp 314 have the Swiss antimicrobial Sanitized® Actifresh treatment. This treatment of the fibers which are in the construction of the EON gloves prevents the occurrence of bacteria which cause unpleasant odors while wearing the gloves through an entire work shift and contributes to the feeling of freshness of the hands once the gloves are taken off.
